Description

Issue:
The Unit Sales Trend visualization is intended to compare the current period/month against the previous period/month (or prior rolling 4-week period).
Currently, the chart appears to be comparing the individual weeks within the last 4 weeks against each other, rather than comparing the current reporting period to the previous reporting period.

Expected Behavior:

- Compare the current month/period against the prior month/period (or prior 4-week period).
- Visualization and labels should clearly reflect a period-over-period comparison.

Current Behavior:

- The chart displays Week 1 through Week 4 side by side, effectively comparing weeks within the same reporting window.
