Description

NOTE: All screenshots provided will be for. Granules.

Products without EPCIS:

For both Ajanta and Granules this value is displaying a very small number (1 and 0 respectively).

However, when you click on the See All link we see many products (including repeat products across different po lines).

The following query returns 87 unique products with issues for the current week:

```
SELECT
COUNT(DISTINCT esa.mat_nbr) AS materials_without_epcis
```

```
FROM cpr_test_scv.stratium_granules.g_epcis_serial_assignment esa
INNER JOIN cpr_test_scv.stratium_granules.g_material_master mm ON esa.mat_nbr = mm.mat_nbr
WHERE esa.doc_date >= DATE_TRUNC('week', CURRENT_DATE())
AND COALESCE(esa.epcis_serial_count, 0) = 0;
```

Failure to Supply Exposure:

The query I have doesn't match the UI.

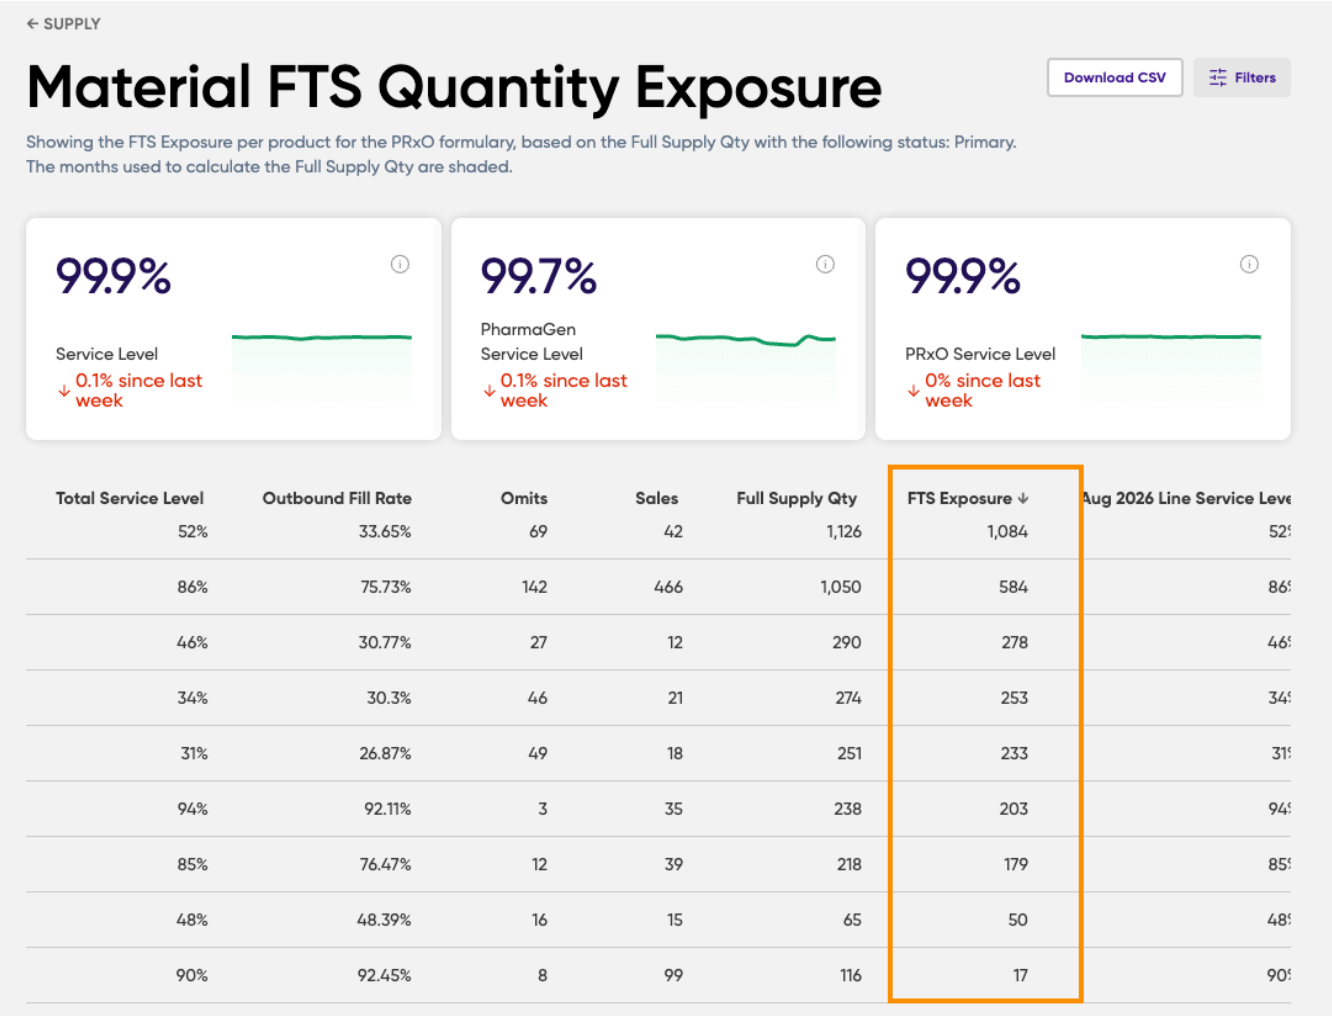

FAILURE TO SUPPLY EXPOSURE ⓘ

23,672 [See all](#)

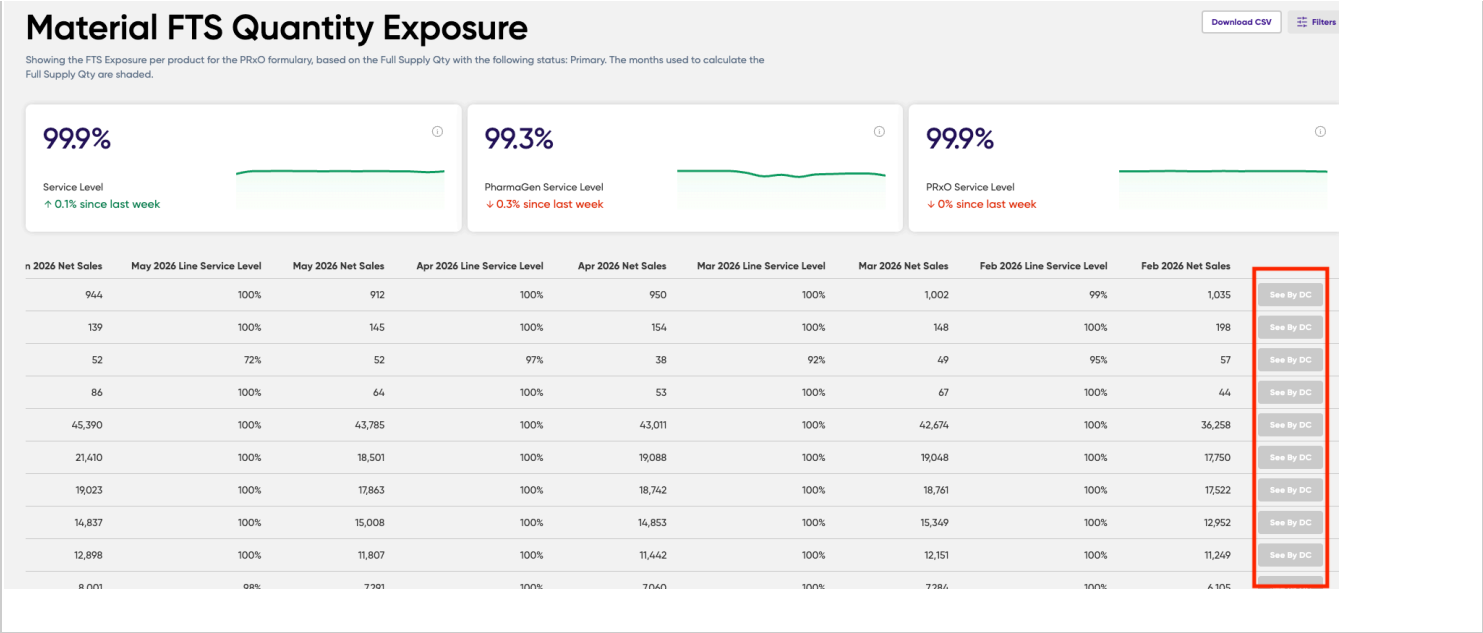

The following query returns 3045 for the FTS exposure quantity for the current week.

```
SELECT
SUM(ot.total_order_qty) - SUM(ot.total_shipped_qty) AS fts_exposure
FROM cpr_test_scv.stratium_granules.g_order_line_transaction ot
INNER JOIN cpr_test_scv.stratium_granules.g_material_master mm ON ot.mat_nbr = mm.mat_nbr
WHERE ot.ord_created_date >= DATE_TRUNC('week', CURRENT_DATE());
```

The Material FTS Quantity Exposure chart, while it doesn't agree with my quantity query, it's much lower than the 23,672 the primary page shows:

Finally, the “See By DC” button on the last column of the table is disabled.

Supply

Products Without EPCIS - KPI

```
WITH params AS (  
  SELECT  
    DATE_SUB(CURRENT_DATE(), WEEKDAY(CURRENT_DATE())) AS week_start, -- Monday  
    CURRENT_DATE() AS week_end,  
    DATE_SUB(CURRENT_DATE(), 90) AS mv_floor  
)  
  
po_ranked AS (  
  SELECT  
    po.po_number,  
    po.po_line_number,  
    po.mat_nbr,  
    po.as_of_date,  
    po.received_qty,  
    ROW_NUMBER() OVER (  
      PARTITION BY po.po_number, po.po_line_number  
      ORDER BY po.as_of_date DESC  
    ) AS rn  
  FROM cpr_dev_scv.stratium_ajanta.g_purchase_order_line po  
  CROSS JOIN params p  
  WHERE po.as_of_date IS NOT NULL  
    AND po.as_of_date >= p.mv_floor  
    AND po.as_of_date <= p.week_end
```

Comment by [Sylaj, Arlind](#) [24/Aug/26]

Why the Material FTS Quantity Exposure table and the FTS Exposure KPI disagree:

These are intentionally different metric, they don't expect to match.

1. Different metric definition:
- **KPI** (weekly-exposure): `total_order_qty - fts_adj_qty_incl_72_hours` = total unfilled quantity across all orders. Every unfilled unit counts.
 - **Material FTS Table** (material-exposure): `full_supply_qty - net_sales` per NDC = the opportunity gap (how much more a product could have sold at full supply). Only products below 95% line service level contribute; products at or above 95% are zeroed out.
1. Different scope:
- KPI aggregates **all sales groups** together.
 - Material FTS table is always filtered to **one sales group at a time** (defaults to PRxO, can be switched to PGEN).
1. Different time window:
- KPI: current week (Monday through today).

- Material FTS table: latest full month available in the aggregated data.

1. Different data source:

- KPI: line-level g_order_line_transaction (daily granularity).
- Material FTS table: pre-aggregated g_order_transactions_aggregated (monthly rollups).

1. 95% threshold gate:

- Material FTS table only reports exposure for products with line service level < 95%. Products performing well contribute zero exposure.
- The KPI has no threshold — every gap between ordered and adjusted counts toward the total.

Summary: The KPI will always be higher because it counts all unfilled units across all sales groups with no performance threshold. The Material FTS table is narrower by design — it isolates the revenue opportunity lost on underperforming products within a single sales group.
