Description

Outbound Unfilled Rate KPI

This is using the current week's unfilled rate as the denominator instead of the previous week's unfilled rate:

current unfilled rate: 3.76
previous unfilled rate: 3.44

(current - previous) / previous = 9.2% (right)
(current - previous) / current = 8.4% (wrong)

OUTBOUND UNFILLED RATE ⓘ

3.76% +8.4% this week

Products with Forecast Changes

I noticed that the Product with Forecast Status Changes (preview cards and table) are showing materials without forecast changes. Confirm with [Ferris](#), [Kristen](#). These materials currently appear before any other when sorting by change in ascending order (they're above the materials with positive forecast changes)

Products in High Demand

This is not displaying correctly the outbound fill rate when it goes over 100%. These numbers are likely including orders with negative quantities (leading to that >100% fill rate)
